Package ‘metis’

December 19, 2018

Title Sub-Regional Nexus Modeling Tool

Version 0.0.1

Description Package to process water-energy-land nexus data to different sub-regional levels.

Depends

License MIT + file LICENSE

Encoding UTF-8

LazyData true

Suggests testthat, knitr, rmarkdown

RoxygenNote 6.1.0

Imports
raster, RColorBrewer, rgcam, tibble, dplyr, tmap, ggplot2, scales, utils,tidyr, rlang, grDevices, processx, rgdal, magrittr, sp, methods, tidyselect, rgeos, zoo, stats

Remotes github::JGCRI/rgcam

VignetteBuilder knitr

R topics documented:

`metis` *metis: Sub-Regional nexus Package*

Description

The Metis package provides

Metis functions

The Metis functions ...

`metis.assumptions` *metis.assumptions*

Description

This function loads holds the different assumptions used throughout the metis package.

Usage

```
metis.assumptions()
```

Details

List of Assumptions

- convEJ2TWh
- convEJ2GW
- conv1975USDperGJ22017USDperMWh
- conv1975USDperGJ22017USDperMBTU
- convertGgTgMTC
- GWPType

Value

A list of assumptions

Examples

```
library(metis)
a<-metis.assumptions()
a # will give full list of assumptions
```

`metis.boundaries` *metis.boundaries*

Description

This function takes a .csv file with gridded lat, long data and aggregates the data by spatial boundaries given different shapefiles.

Usage

```
metis.boundaries(boundaryRegShape = NULL, boundaryRegShpFolder = NULL,
  boundaryRegShpFile = NULL, boundaryRegCol = NULL,
  boundaryRegionsSelect = NULL, subRegShape = NULL,
  subRegShpFolder = NULL, subRegShpFile = NULL, subRegCol = NULL,
  subRegionsSelect = NULL, subRegType = "subRegType",
  dirOutputs = paste(getwd(), "/outputs", sep = ""), nameAppend = "",
  expandPercent = 2, overlapShape = NULL, overlapShpFolder = NULL,
  overlapShpFile = NULL, labelsSize = 1.2, fillcolorNA = NULL,
  projX = "+proj=longlat +datum=WGS84 +no_defs +ellps=WGS84 +towgs84=0,0,0",
  extendedFillColor = "grey75", extendedBGColor = "lightblue1",
  extendedHighLightColor = "cornsilk1", extendedLabelsColor = "grey30",
  extdendedLabelSize = 0.7, extension = T, fillPalette = "Spectral",
  cropSubShape2Bound = T, grids = NULL)
```

Arguments

`boundaryRegShape`
: Default=NULL,

`boundaryRegShpFolder`
: Default= NULL . Suggested paste(getwd(),"/dataFiles/gis/naturalEarth",sep Default=""),

`boundaryRegShpFile`
: Default=NULL . Suggested paste("ne_10m_admin_0_countries",sep Default=""),

`boundaryRegCol`
: Default=NULL. Suggested "NAME_0",

`boundaryRegionsSelect`
: Default=NULL. Suggested GADM country Names

`subRegShape`
: Default=NULL,

`subRegShpFolder`
: Default=NULL. Suggested paste(getwd(),"/dataFiles/gis/naturalEarth",sep Default=""),

`subRegShpFile`
: Default=NULL. Suggested paste("ne_10m_admin_1_states_provinces",sep Default=""),

`subRegCol`
: Default="NULL Suggested for states "name",

`subRegionsSelect`
: Default=NULL,

`subRegType`
: Default="subRegType",

`dirOutputs`
: Default=paste(getwd(),"/outputs",sep Default=""),

`nameAppend` Default=””,

`expandPercent` Default=2,

`overlapShape` Default = NULL

`overlapShpFolder` Default = NULL. For Basins use paste(getwd(),”/dataFiles/gis/basin_gcam”,sep=””),

`overlapShpFile` Default = NULL. For Basins use =”Global235_CLM_final_5arcmin_multipart”

`labelsSize` Default =1.2

`fillcolorNA` Default =NULL

`projX` Default =”+proj=longlat +datum=WGS84 +no_defs +ellps=WGS84 +towgs84=0,0,0”,

`extendedFillColor` Default = ”grey75”,

`extendedBGColor` Default = ”lightblue1”,

`extendedHighLightColor` Default = ”cornsilk1”,

`extendedLabelsColor` Default = ”grey30”

`extdendedLabelSize` Default =0.7

`extension` Default = T

`fillPalette` Default =”Spectral”,

`cropSubShape2Bound` Default = T. Set to False if subregion shape is larger than boundary, but desired fro extension.

`grids` Default = NULL. Suggested is c(paste(getwd(),”/dataFiles/grids/emptyGrids/grid_025.csv”,s paste(getwd(),”/dataFiles/grids/emptyGrids/grid_050.csv”,sep=””)) This may happen in the case of disputed boundaries.

Value

A table with data by polygon ID for each shapefile provided

`metis.chart` *metis.chart*

Description

This function produce different kinds of charts for the metis package. iIt requires a table in the Metis format. Each figure is accompanied with a csv table.

Usage

```
metis.chart(data, chartType = "bar", position = "stack", xData = "x",
  yData = "value", class = "class1", group = "scenario",
  classPalette = "classPalette1", classLabel = "classLabel1",
  xLabel = "xLabel", yLabel = "yLabel", facet_rows = "region",
  facet_columns = "scenario", ncolrow = 4, scales = "fixed",
  useNewLabels = 0, units = "units", xBreaksMaj = 10,
  xBreaksMin = 5, yBreaksMajn = 5, yBreaksMinn = 10,
  sizeBarLines = 0.5, sizeLines = 1.5, printFig = T,
  fileName = "chart", dirOutputs = paste(getwd(), "/outputs", sep =
  ""), figWidth = 13, figHeight = 9, pdfpng = "png")
```

Arguments

`data`	data table for charting
`chartType`	Type of chart: ”bar” or ”line”
`position`	Position in bar charts. ”identity”, ”stack” or ”dodge”
`xData`	Default ”x”
`yData`	Default ”value”
`class`	Default ”class1”
`group`	Default ”scenario”
`classPalette`	Default ”classPalette1”
`classLabel`	Default ”classLabel1”
`xLabel`	Default ”xLabel”
`yLabel`	Default ”units”
`facet_rows`	Default ”region”
`facet_columns`	Default ”scenario”
`ncolrow`	Number of columns or Rows for Faceted plots
`scales`	Default ”fixed”
`useNewLabels`	Default 0
`units`	Default ”units”
`xBreaksMaj`	Default 10
`xBreaksMin`	Default 5
`yBreaksMajn`	Default 5
`yBreaksMinn`	Default 10
`sizeBarLines`	Default 0.5
`sizeLines`	Default 1.5
`printFig`	Default = T,
`fileName`	Default = ”map”,
`dirOutputs`	Default = paste(getwd(),”/outputs”,sep Default = ””)
`figWidth`	Default = 9,
`figHeight`	Default = 7,
`pdfpng`	Default = ”png”,

Value

Returns the formatted data used to produce chart

Examples

```
# Examples below show the default chart with minimum information
# and then adding progressively more details.

library(tibble)
library(dplyr)
tbl <- tribble (
~x,     ~value,
2010,   15,
2020,   20,
2030,   30
)
metis.chart(data=tbl,xData="x",yData="value",chartType = "line")
metis.chart(data=tbl,xData="x",yData="value",chartType = "bar")
```

metis.chartsProcess *metis.chartsProcess*

Description

This function produces charts given any number of tables in the metis format. The metis.chart() function produces charts for each region nd scenario. If there are more than one scenario then the function also produces a folder for diffplots. The input tables should be .csv files with the following columns: scenario, region, sources, param, x, xLabel, vintage, class1, class2, units, value, aggregate, classLabel1,classPalette1,classLabel2,classPalette2. Running the metis.readgcam automatically produces An empty template with these columns for the relevant parameters. Each column is defined below:

Usage

```
metis.chartsProcess(dataTables = NULL, rTable = NULL, scenRef = NULL,
  dirOutputs = paste(getwd(), "/outputs", sep = ""), pdfpng = "png",
  xRange = "All", xCompare = c("2015", "2030", "2050", "2100"),
  paramsSelect = "All", regionsSelect = "All", xData = "x",
  yData = "value", xLabel = "xLabel", yLabel = "units",
  aggregate = "sum", class = "class", classPalette = "pal_Basic",
  regionCompareOnly = 1, useNewLabels = 0, sizeBarLines = 0,
  sizeLines = 1.5, nameAppend = "")
```

Arguments

`dataTables` Vector of strings with full path to datatables to be read in. Example c(”D:/metis/outputs/Colombia/dataTable_Colombia_1975to2100.csv”, ”D:/metis/outputs/C Where ”dataTableLocal_Colombia_1975to2100.csv” is the new datafile created based on ”dataTableTemplate_Colombia_1975to2100.csv” and contains new local data.

`rTable` If a table is created directly in R as a data.frame or tibble it can entered here.

`scenRef` The reference scenario to compare against. Default will pick first scenario from list f all scenarios

`dirOutputs` Full path to directory for outputs. Default is paste(getwd(),”/outputs”,sep=””)

`pdfpng` Choose the format for outputs. Either ”pdf”, ”png” or ”both. Default is ”png”

`xRange` Default ”All”. Range of x values eg. c(2001:2005)

`xCompare` Choose the years to compare scenarios for xScenSelectYears plot. Default is c(”2015”,”2030”,”2050”,”2100”)

`paramsSelect` Default = ”All”. Select the paramaters to analyze from the the tables provided. Full list of parameters: c(”finalNrgbySec”, ”primNrgConsumByFuel”, ”elecByTech”, ”watConsumBySec”, ”watWithdrawBySec”, ”watWithdrawByCrop”, ”watBioPhysCons”, ”irrWatWithBasin”,”irrWatConsBasin”, ”gdpPerCapita”, ”gdp”, ”gdpGrowthRate”, ”pop”, ”agProdbyIrrRfd”, ”agProdBiomass”, ”agProdForest”, ”agProdByCrop”, ”landIrrRfd”, ”aggLandAlloc”, ”LUCemiss”, ”co2emission”, ”co2emissionByEndUse”, ”ghgEmissionByGHG”, ”ghgEmissByGHGGROUPS”)

`regionsSelect` Default = ”All”. Select regions to create charts for.

`xData` Default ”x”

`yData` Default ”value”

`xLabel` Default ”xLabel”

`yLabel` Default ”units”

`aggregate` Default ”sum”

`class` Default ”class”

`classPalette` Default ”pal_Basic” from metis.colors()$pal_Basic

`regionCompareOnly`
Default 0. If set to 1, will only run comparison plots and not individual

`useNewLabels` Default 0

`sizeBarLines` Default 0.5

`sizeLines` Default 1.5

`nameAppend` Default =””

Details

List of Assumptions

- scenario: The name of the new data scenario
- region: The region for the data
- sources: Sources for the data
- param: Name of the parameter
- x: The x axis variable values
- xLabel: X axis Label
- vintage: Vintages if any. If not relevant then just enter ”Vintage”
- class1: Classes or types (eg. if param is water_demands then the classes may be Industry, Agriculture etc.)
- class2: A second category of classes if exists.

- units: Units for the parameter. These are used as the y axis label.
- value: The parameter value.
- aggregate: Either "sum" or "mean". This paramater is used to determine how to aggregate across regions or scenarios.
- classLabel1: If class1 exists then this will be legend Label. If it doesnt exist enter "classLabel1"
- classPalette1: An R or metis.colors() palette. Can leave the default as "pal_16".
- classLabel2: If class2 exists then this will be legend Label. If it doesnt exist enter "classLabel2"
- classPalette2: An R or metis.colors() palette. Can leave the default as "pal_16".

Value

Produces charts in output folder and also returns combined table in metis format.

`metis.colors` *metis.colors*

Description

This function loads various color palettes used previously in GCAM as well as new palettes for Metis modeling to the global environment

Usage

```
metis.colors(palx = NULL)
```

Arguments

`palx` Palette name to view the palette colors. Eg. metis.colors("pal_Basic")

Details

List of Color Palettes

- pal_HDDCDD
- pal_16
- elec_tech_colors
- elec_renew_colors
- building_colors
- trn_fuel_colors
- enduse_fuel_numbered
- enduse_colors
- pal_pri_ene
- pal_pri_fuelcost
- pal_emiss_sector
- pal_landuse

- pal_hydrogen
- pal_refliq
- emiss_by_enduse_colors
- biouse_colors
- pal_Basic
- pal_Gas
- pal_Diff
- pal_Diff5
- pal_Absolute
- pal_Absolute5
- pal_Unassigned
- pal_elec_subsec
- pal_elec_finalNrgFuel
- pal_elec_techs
- pal_elec_sec
- pal_finalNrg_sec
- pal_pri_ene
- pal_elec_tech_colors

Value

A list of color palettes.

Examples

```
library(metis)
a<-metis.colors()
pie(rep(1,length(a$pal_Basic)),label=names(a$pal_Basic),col=a$pal_Basic)
```

metis.grid2poly *metis.grid2poly*

Description

This function takes a .csv file with gridded lat, long data and aggregates the data by spatial boundaries given different shapefiles.

Usage

```
metis.grid2poly(grid = NULL, boundaryRegionsSelect = NULL,
  subRegShape = NULL, subRegShpFolder = NULL, subRegShpFile = NULL,
  subRegCol = NULL, subRegType = "subRegType", aggType = NULL,
  dirOutputs = paste(getwd(), "/outputs", sep = ""), nameAppend = "",
  labelsSize = 1.2)
```

Arguments

`grid`	Default=NULL,
`boundaryRegionsSelect`	Default=NULL,
`subRegShape`	Default=NULL,
`subRegShpFolder`	Default = NULL, Suggested paste(getwd(),”/dataFiles/gis/naturalEarth”,sep Default=””)
`subRegShpFile`	Default = NULL, paste(”ne_10m_admin_1_states_provinces”,sep Default=””),
`subRegCol`	Default = NULL, ”NAME_1”,
`subRegType`	Default=”subRegType”,
`aggType`	Default=NULL,
`dirOutputs`	Default=paste(getwd(),”/outputs”,sep Default=””),
`nameAppend`	Default=””,
`labelsSize`	Default =1.2

Value

A table with data by polygon ID for each shapefile provided

`metis.map` *metis.map*

Description

This function produce different kinds of maps for the metis package. Each figure is accompanied with a csv table.

Usage

```
metis.map(dataPolygon = NULL, dataGrid = NULL, dataRaster = NULL,
  shpFolder = NULL, shpFile = NULL, fillPalette = "Spectral",
  borderColor = "gray20", lwd = 1, lty = 1, bgColor = "white",
  frameShow = F, fillColumn = NULL, labels = F, labelsSize = 1.2,
  labelsColor = "black", labelsAutoPlace = F, figWidth = 9,
  figHeight = 7, legendWidth = -1, legendShow = F,
  legendOutside = T, legendTextSize = 1, legendTitleSize = 2,
  legendOutsidePosition = NULL, legendPosition = NULL,
  legendDigits = NULL, legendTitle = "Legend",
  legendStyle = "pretty", legendFixedBreaks = 5, legendBreaks = NULL,
  pdfpng = "png", underLayer = NULL, overLayer = NULL,
  printFig = T, fileName = "map", dirOutputs = paste(getwd(),
  "/outputs", sep = ""), facetFreeScale = F, facetRows = NA,
  facetCols = 3, facetBGColor = "grey30", facetLabelColor = "white",
  facetLabelSize = 1.5, alpha = 1, fillcolorNA = NULL,
  facetsON = T, panelLabel = NULL)
```

Arguments

`dataPolygon`	Default = NULL,
`dataGrid`	Default = NULL,
`dataRaster`	Default = NULL,
`shpFolder`	Default = paste(getwd(),”/dataFiles/gis/admin_gadm36_1”,sep Default = ””),
`shpFile`	Default = paste(”gadm36_1”,sep Default = ””),
`fillPalette`	Default = ”Spectral”,
`borderColor`	Default = ”gray20”,
`lwd`	Default = 1,
`lty`	Default = 1,
`bgColor`	Default = ”white”,
`frameShow`	Default = F,
`fillColumn`	Default = NULL, # Or give column data with
`labels`	Default = F,
`labelsSize`	Default = 1.2,
`labelsColor`	Default = ”black”,
`labelsAutoPlace`	Default = F,
`figWidth`	Default = 9,
`figHeight`	Default = 7,
`legendWidth`	Default = -1,
`legendShow`	Default = F,
`legendOutside`	Default = T,
`legendTextSize`	Default = 0.8,
`legendTitleSize`	Default = 1,
`legendOutsidePosition`	Default = NULL, # ”right”,”left”,”top”,”bottom”, ”center”
`legendPosition`	Default = NULL, # c(”RIGHT’,’top’) - RIGHT LEFT TOP BOTTOM
`legendDigits`	Default = NULL,
`legendTitle`	Default = ”Legend”,
`legendStyle`	Default = ”pretty”,
`legendFixedBreaks`	Default = ”5”,
`legendBreaks`	Default = NULL,
`pdfpng`	Default = ”png”,
`underLayer`	Default = NULL,
`overLayer`	Default = NULL,
`printFig`	Default = T,
`fileName`	Default = ”map”,
`dirOutputs`	Default = paste(getwd(),”/outputs”,sep Default = ””),

facetFreeScale	Default = F,
facetRows	Default = NA,
facetCols	Default = 3,
facetBGColor	Default = ”grey75”,
facetLabelColor	Default = ”black”,
facetLabelSize	Default = 1.5,
alpha	Default = 1
fillcolorNA	Default =NULL
facetsON	Default =F,
panelLabel	Default = NULL,

Value

Returns the formatted data used to produce chart

metis.mapProcess *metis.mapProcess*

Description

This function produce different kinds of maps for the metis package. Each figure is accompanied with a csv table.

Usage

```
metis.mapProcess(polygonDataTables = NULL, gridDataTables = NULL,
  dirOutputs = paste(getwd(), "/outputs", sep = ""), xRange = "All",
  labels = F, labelsSize = 1.2, subRegShape = NULL,
  subRegShpFolder = NULL, subRegShpFile = NULL, subRegCol = NULL,
  subRegType = "subRegType", nameAppend = "",
  legendOutsidePosition = NULL, legendPosition = NULL,
  legendFixedBreaks = 5, animateOn = T, delay = 100,
  legendTitleSize = 1, scenRef = NULL, extension = F,
  boundaryRegShape = NULL, boundaryRegShpFolder = NULL,
  boundaryRegShpFile = NULL, boundaryRegCol = NULL,
  boundaryRegionsSelect = NULL, fillcolorNA = NULL,
  extendedFillColor = "grey75", extendedBGColor = "lightblue1",
  extendedHighLightColor = "cornsilk1", extendedLabelsColor = "grey30",
  extdendedLabelSize = 0.7, extendedShape = NULL,
  extendedShapeCol = NULL, expandPercent = 2,
  projX = "+proj=longlat +datum=WGS84 +no_defs +ellps=WGS84 +towgs84=0,0,0")
```

Arguments

`polygonDataTables`
Default = NULL,

`gridDataTables` Default = NULL,

`dirOutputs` Default = paste(getwd(),”/outputs”,sep=””),

`xRange` Default =”All”,

`labels` Default = F,

`labelsSize` Default = 1.2,

`subRegShape` Default = NULL,

`subRegShpFolder`
Default = paste(getwd(),”/dataFiles/gis/admin_gadm36”,sep=””),

`subRegShpFile` Default = paste(”gadm36_1”,sep=””),

`subRegCol` Default =”NAME_1”,

`subRegType` Default =”subRegType”,

`nameAppend` Default =””

`legendOutsidePosition`
Default = NULL, # ”right”,”left”,”top”,”bottom”, ”center”

`legendPosition` Default = NULL, # c(”RIGHT’,’top’) - RIGHT LEFT TOP BOTTOM

`legendFixedBreaks`
Default = ”5”,

`animateOn` Default = T,

`delay` Default = 100,

`legendTitleSize`
Default = 1,

`scenRef` Default = NULL

`extension` Default =F,

`boundaryRegShape`
Default = NULL,

`boundaryRegShpFolder`
Default= NULL . Suggested paste(getwd(),”/dataFiles/gis/naturalEarth”,sep Default=””)

`boundaryRegShpFile`
Default=NULL . Suggested paste(”ne_10m_admin_0_countries”,sep Default=””),

`boundaryRegCol` Default=NULL. Suggested ”NAME_0”,

`boundaryRegionsSelect`
Default = NULL,

`fillcolorNA` Default = NULL

`extendedFillColor`
Default =”grey75”,

`extendedBGColor`
Default =”lightblue1”,

`extendedHighLightColor`
Default =”cornsilk1”,

`extendedLabelsColor`
: Default =”grey30”,

`extdendedLabelSize`
: Default =0.7,

`extendedShape` Default =NULL,

`extendedShapeCol`
: Default =NULL,

`expandPercent` Default =2

`projX` Default = projX=”+proj=longlat +datum=WGS84 +no_defs +ellps=WGS84 +towgs84=0,0,0”

Value

Returns the formatted data used to produce chart

`metis.prepGrid` *metis.prepGrid*

Description

This function prepares gridded data for use with other metis modules.

Usage

```
metis.prepGrid(demeterFolder = NULL, demeterScenario = NULL,
  demeterTimesteps = seq(from = 2005, to = 2100, by = 5),
  demeterUnits = NULL, tethysFolder = NULL, tethysScenario = NULL,
  tethysUnits = NULL, tethysFiles = c("wddom", "wdelec", "wdirr",
  "wdliv", "wdmfg", "wdmin", "wdnonag", "wdtotal"), xanthosFolder = NULL,
  xanthosScenario = NULL, xanthosUnits = NULL, xanthosFiles = NULL,
  xanthosCoordinatesPath = paste(getwd(),
  "/dataFiles/grids/xanthosCoords/coordinates.csv", sep = ""),
  scarcityXanthosRollMeanWindow = 10, dirOutputs = paste(getwd(),
  "/outputs", sep = ""), reReadData = 1,
  gridMetisData = paste(dirOutputs, "/Grids/gridMetis.RData", sep = ""))
```

Arguments

`demeterFolder` Full path to demeter outputs

`demeterScenario`
: Name of demeter scenario

`demeterTimesteps`
: Default is seq(from=2005,to=2100,by=5)

`demeterUnits` No Default

`tethysFolder` Folder for tethys results

`tethysScenario` Scenario name for tethys run

`tethysUnits` No Default

`tethysFiles` Default =c(”wddom”,”wdelec”,”wdirr”,”wdliv”,”wdmfg”,”wdmin”,”wdnonag”,”wdtotal”), `xanthosFolder` Xanthos Folder Path

`xanthosScenario`
: Xanthos Scenario Name

`xanthosUnits` Xanthos Untis

`xanthosFiles` Xanthos Files to Read

`xanthosCoordinatesPath`
: paste(getwd(),"/dataFiles/grids/xanthosCoords/coordinates.csv",sep="")

`scarcityXanthosRollMeanWindow`
: Default = 10,

`dirOutputs` Default =paste(getwd(),"/outputs",sep=""),

`reReadData` Default =1,

`gridMetisData` Default = paste(dirOutputs, "/Grids/gridMetis.RData", sep = "")

Value

A table with data by polygon ID for each shapefile provided

`metis.readgcam` *metis.readgcam*

Description

This function connects to a gcamdatabase and uses a query file to out results into a table ready for plotting.

Usage

```
metis.readgcam(gcamdatabasePath, gcamdatabaseName,
  queryxml = "metisQueries.xml", scenOrigNames, scenNewNames = NULL,
  reReadData = T, dataProj = "dataProj.proj",
  dirOutputs = paste(getwd(), "/outputs", sep = ""),
  regionsSelect = NULL, queriesSelect = "All", paramsSelect = "All")
```

Arguments

`gcamdatabasePath`
: Path to gcam database folder

`gcamdatabaseName`
: Name of gcam database

`queryxml` Full path to query.xml file

`scenOrigNames` Original Scenarios names in GCAM database in a string vector. For example c('scenario1','scenario2).

`scenNewNames` New Names which may be shorter and more useful for figures etc. Default will use Original Names. For example c('scenario1','scenario2)

`reReadData` If TRUE will read the GCAM data base and create a queryData.proj file in the same folder as the GCAM database. If FALSE will load a '.proj' file if a file with full path is provided otherwise it will search for a dataProj.proj file in the existing folder which may have been created from an old run.

`dataProj` Optional. A default ’dataProj.proj’ is produced if no .Proj file is specified.

`dirOutputs` Full path to directory for outputs

`regionsSelect` The regions to analyze in a vector. Example c(’Colombia’,’Argentina’)

`queriesSelect` Default = ”All”. Vector of queries to read from the queryxml for example c(”Total final energy by aggregate end-use sector”, ”Population by region”). The queries must be availble in the queryxml file. Current list of queries and generated paramaters are:

- ”Total final energy by aggregate end-use sector”. Parameters generated: finalNrgbySec.
- ”primary energy consumption by region (direct equivalent)”. Parameters generated: primNrgConsumByFuel
- ”Electricity generation by aggregate technology”. Parameters generated: elecByTech
- ”water withdrawals by sector”. Parameters generated: watWithdrawBySec
- ”water consumption by sector”. Parameters generated: watConsumBySec
- ”water withdrawals by crop”. Parameters generated: watWithdrawByCrop
- ”biophysical water demand by crop type and land region”. Parameters generated: watBioPhysCons
- ”water withdrawals by water mapping source”. Parameters generated: irrWatWithBasin
- ”water consumption by water mapping source”. Parameters generated: irrWatConsBasin
- ”GDP per capita MER by region”. Where MER is ”Market Exchange Rate”. Parameters generated: gdpPerCapita.
- ”GDP MER by region”. Where MER is ”Market Exchange Rate”. Parameters generated: gdp, gdpGrowthRate
- ”Population by region”. Parameters generated: pop.
- ”ag production by tech”. Where technologies signify irrigated or rainfed. Parameters generated: agProdbyIrrRfd
- ”Ag Production by Crop Type”. Parameters generated: agProdBiomass, agProdForest, agProdByCrop
- ”land allocation by crop and water source”. Parameters generated: landIrrRfd
- ”aggregated land allocation”. Parameters generated: aggLandAlloc
- ”Land Use Change Emission”. Parameters generated: LUCemissFut
- ”CO2 Emissions by enduse”. Parameters generated: co2emission, co2emissionByEndUse,
- ”GHG emissions by subsector”. Parameters generated: ghgEmissByGHGGROUPS, ghgEmissionByGHG

`paramsSelect` Default = ”All”. If desired select a subset of paramaters to analyze from the full list of parameters: c(”finalNrgbySec”, ”primNrgConsumByFuel”, ”elecByTech”, ”watConsumBySec”, ”watWithdrawBySec”, ”watWithdrawByCrop”, ”watBioPhysCons”, ”irrWatWithBasin”,”irrWatConsBasin”, ”gdpPerCapita”, ”gdp”, ”gdpGrowthRate”, ”pop”, ”agProdbyIrrRfd”, ”agProdBiomass”, ”agProdForest”, ”agProdByCrop”, ”landIrrRfd”, ”aggLandAlloc”, ”LUCemiss”, ”co2emission”, ”co2emissionByEndUse”, ”ghgEmissionByGHG”, ”ghgEmissByGHGGROUPS”)

Value

A list with the scenarios in the gcam database, queries in the queryxml file and a tibble with gcam data formatted for metis charts.

`metis.templates` *metis.templates*

Description

This script holds various templates used for different scripts.

Usage

```
metis.printPdfPng(figure, dir, filename, figWidth = 13, figHeight = 9,
  pdfpng = "png")

metis.chartsThemeLight()
```

Arguments

`figure`	Figure to be printed in function metis.printPdfPng
`dir`	Directory to print figure to in function metis.printPdfPng
`filename`	Filename for figure printed in function metis.printPdfPng
`figWidth`	Figure Width in inches for figures to be printed in function metis.printPdfPng
`figHeight`	Figure height in inches for figures to be printed in function metis.printPdfPng
